EDUCATION

Boston University, College of Arts and Sciences

Expected May 2027

Bachelor's of Arts in Computer Science

Boston, MA

- Relevant Courses: Data Structures & Algorithms, Databases, Linear Algebra, Analysis of Algorithms, Data Mining, Probability in Computing, Software Engineering, Web Development, Computer Systems
- **GPA: 3.89/4.00**

EXPERIENCE

Harvard University | *Teaching Assistant*

Cambridge, MA | June 2026 - Present

- Teach discussion sections for an intensive **Java-based** Introduction to Computer Science and Data Structures course, reinforcing object-oriented programming, linked lists, trees, graphs, and algorithms.
- Mentor a cohort of **9 students** during weekly office hours, debugging Java programs, reviewing code quality, and providing individualized guidance on algorithmic problem solving and data structures.
- Maintain and deploy course website updates using **AWS S3**, publishing HTML-based instructional materials, labs, and solution releases throughout the term.

Boston University | *Undergraduate Course Assistant*

Boston, MA | September 2024 - Present

- Facilitates labs and supports **900+ students** in mastering core CS concepts including Python programming, debugging, and recursive algorithm design.
- Serves as **grading coordinator** for 11 other Course Assistants to ensure consistent workflows and timely grading.

Boston University Spark! Technology Fellowship | *Technical Innovator Fellow*

Boston, MA | January 2026 - May 2026

- Served as the **Product Owner** for a 4-member cross-functional software development team using Agile/Scrum, facilitating design and development sprint planning, execution, and retrospectives.
- Conducted **30+ stakeholder interviews** and surveys reaching 100+ respondents to validate customer needs and define actionable software requirements.

PROJECTS

ClockIn | *Demo*

React, FastAPI, Supabase (PostgreSQL), Python, OpenAI API | January 2026 - Present

- Built a full-stack productivity web application with a **React** frontend, **FastAPI** async backend, and Supabase PostgreSQL database, implementing JWT-based user authentication and a normalized relational data model.
- Engineered an **AI-powered** sticky note to task conversion pipeline using the **OpenAI API** and GPT-4o-mini, extracting structured task fields from unstructured user notes and returning them via a confirmed bulk insert flow.
- Designed and implemented a **layered service architecture** (controller → service → repository) with dependency injection, separating domain logic across task, sticky note, and schedule bounded contexts.

Fashion Forward | *Demo*

TypeScript, React, RESTful APIs | October 2025

- Integrated multiple third-party **REST APIs** (Gemini, ElevenLabs, Google Shopping) using asynchronous HTTP requests to generate AI-powered style recommendations.
- Built a React frontend in TypeScript to render personalized recommendations and multilingual text-to-speech.
- Designed client-server data flow to extract keywords and fetch live product listings via API consumption.
- Awarded **Best Use of Gemini API** among competing hackathon teams for innovative AI integration.

StyleTime (Digital Closet Web App) | *Demo*

HTML, CSS, JavaScript, Indexed DB | August 2025

- Built and deployed a full-stack browser-based web application for digital wardrobe management.
- Implemented CRUD operations using IndexedDB to store and manage 150+ compressed image assets.
- Added JSON-based import/export functionality for structured data persistence and backup.

SKILLS

Technical Languages: Python, Java, SQL, NoSQL, Ocaml, JavaScript, C, x86 Assembly

Frameworks/Tools: Git, HTML, CSS, React, AWS, MongoDB, Pandas, Numpy, Supabase, Node, Figma

Language: English (Fluent), Spanish (Fluent)
